LOGO VARIATIONS

Our brand may need to be presented in different printing and digital scenarios, these colour selections will allow for the greatest range in design options. Whenever possible, the logo should appear in its primary state.

The inverse logo variant should only be used when the SmartTrade navy or black is the background colour. Black and white logo variants are to be used on all other background colours or over clear space in imagery.

Do not deviate from these variations, see below for more information on our corporate colour palette.
Do not put the logo in a box, the examples shown below are indicative of a dark background only.

Whilst every effort has been made to match to the Pantone colours given, there is a possibility that varying results may occur. The CMYK specifications in these guidelines are correct.
